

Business activities

- Exploration of existing waste deposits, landfills and foundation analysis
- accredited sampling analysis of waste-, building material-, bottom-, gas-, compost-, mud-, glass-, ceramic- and water samples
- preparation of danger prevention- and restoration concepts, restoration costs calculations and expertises
- pollutant dispersal calculations
- technical steering of removal-, safety-, restoration measures
- monitoring of existing waste deposits disposals and landfills
- preparation of safety- and health prevention plans; support of building sites as safety and health coordinator and in radiation protection control areas, additional as radiation protection officer
- planning of covering- and sealing systems for disposals and landfills
- engineer technical steering and monitoring disposal building measures; preparation of installation concepts
- subsidence measurement, - calculations, -forecasts
- water balance calculations and hydraulic calculations
- planning and monitoring of water catchment, -discharge, -retention, -leaching systems
- economic efficiency calculations for water- and waste-economic projects
- stable analysis, -calculations, and - certificates
- preservation of evidence procedures, damage receiver and calculation for earth-moving and excavation works and for restoration and break-up measures as well as water projects
- foundation consultations, geotechnical certificates
- compaction control for road construction and earth moving
- geotechnical laboratory and locally analysis
- analysis and certificates of environmental compatibility, environmental impact tests
- engineer professional preparation and support of authorisation procedures
- planning, monitoring and documentation of break-ups, preparation of disposal and recycling concepts
- engineer technical measurement, digitalisation of drawings- and planning facts; peg out and mark out of planning points in the territory
- three-dimensional CAD-planning for waste economic projects and hydraulic engineering utility, for projects of mining, earth moving and substructure as well as military used real estate
- construction inspection, self-monitoring and external control
- planning city-dehydration for pressure systems
- planning of sewage treatment plant, pumping station including pressure line
- planning for the coverage of industrial areas
- planning of flood protection constructions, rain storage
- construction planning and planning of canalization

Summary of business activities engineering, analyzing and surveying of:
